

THERMORY®

SaferWood
Thermex FR

Our Commitment to Responsible Fire Protection

At Thermory, we take our sustainability efforts incredibly seriously, which is why we partnered with SaferWood® by Chemco, a pioneer in the field of exterior fire-retardants for wood.

Their proprietary Thermex-FR® fire-retardant was developed to ensure environmental responsibility with a safe, non-toxic formula. Unlike halogenated fire retardants, which are associated with significant health and environmental concerns, Thermex-FR® is a phosphorus and nitrogen-based formula that makes wood ignition resistant for the life of the wood, through the process of thermosetting polymer chemistry. Thermex-FR® contains no PFAS or halogenated compounds and has been independently evaluated by the Washington State Department of Ecology as non-toxic and non-hazardous.

SaferWood® does not require any special handling and can be disposed of in the same manner as untreated wood. Thermory believes performance and environmental responsibility should never be at odds, and SaferWood® Thermex-FR® helps us deliver both.
